Department of General Surgery

Master Degree of General Surgery, paper 2

May 2012

Time allowed 3 hours

All questions must be answered:

1- Discuss man made faecal fistula.

2- A 52 year old male presented following an attack of haematemesis. He has been resuscitated at a small hospital and arrived in your casualty department with a pulse rate of 104 and a blood pressure of 100 over 70. Two weeks ago he has been endoscoped and found to have an ulcer on the duodenal cap.

He is on no medication apart from omeprazole

outline your management of this patient.

3- A 50 year old female is investigated for vague abdominal pain of one month duration with ultrasound by her local doctor. The ultrasound has demonstrated a probable, roughly 5x4x2 cm diameter solid retroperitoneal mass, positioned in the para-aortic region below the level of pancreas.

- What is the differential diagnosis?

- Discuss your further investigation.

- How can you manage this patient?
