Civil Eng. Department  
Second Semester Examination, 2014-2015  
Date of Exam: 23/ 5 / 2015

Subject: Reinforced Concrete  
Code: CVE 302  
Year : 3<sup>rd</sup> Year Civil  
Time Allowed : 4 hours  
Total Marks : 120 marks

- Any data not given is to be assumed

Question 1 (60%) :

Figure (1) shows 8 symmetrical radial frames 'abcd' which are hinged at 'a'. The 8 frames carry a sky light of a circular slab on panelled beams system supported on 8 columns. The diameter of the sky light is 10 m with 1m cantilever slab and its height is 2 m as shown.

Assume the following data:

- Total working loads of slabs:

$$(D.L + L.L + \text{Floor Cover}) = 1.0 \text{ t / m}^2$$

$$f_{cu} = 300 \text{ kg/cm}^2. \quad \text{Steel 36/52.}$$

It is required :

- 1- Complete design\* of the circular sky light as panelled beams system. (15%)
- 2- Complete design\* of the circular beam and the column at 'e' (5%)
- 3- Complete design of slabs 'dc' (5%)
- 4- Complete design of the typical radial frame 'abb'cd' (25%)
- 5 - Circular beam at 'd'. (5%)
- 6- Assume the footing dimensions at 'a' if the bearing capacity of the soil = 2 kg/cm<sup>2</sup>. Calculate the eccentricity of the foundation to get uniform stress. (5%)

\* Complete Design = Design + Drawing.
